

Airborne Aerial Fitness Website

Design and Development Task Brief

Assigned to

Aditya Kamarouthu

Delivery deadline

Tomorrow, end of day.

The expectation is to deliver a complete, responsive, visually polished, deployment-ready website by the deadline.

Missing final content, copy, photography, or other assets must not delay the work.

1. Project context

Airborne Aerial Fitness is a premium boutique fitness studio in Mumbai with locations in Lower Parel and Mazgaon.

The brand offers multiple movement and fitness formats for adults and children, including:

- Aerial Fitness
- Aerial Silk & Hoop
- Kids Aerial Fitness
- Mat Pilates
- Functional Training
- Dance Fitness
- Trampoline Fitness
- Yoga

Aerial fitness is Airborne's strongest and most distinctive offering. It is the brand's signature capability and should receive the greatest visual emphasis.

However, Airborne should not be positioned only as an aerial studio. The complete positioning is:

A premium boutique fitness studio built around movement, strength, confidence, and community, with aerial fitness as its signature differentiator.

The website must balance both parts of the brand:

1. Establish Airborne as a leading and exceptional aerial fitness destination.
2. Communicate that it is also a complete boutique fitness studio offering multiple high-quality fitness formats.

2. Existing Airborne ecosystem

Airborne already has a member-facing application.

The application handles the dynamic and transactional parts of the customer journey, including:

- Membership exploration
- Enrollment
- Payments
- Session booking
- Schedule viewing
- Waitlists
- Membership management
- Session balances
- Offers
- Trial booking

The website must not recreate these functions.

Its role is to:

- Create a powerful first impression
- Explain the Airborne brand
- Showcase the studio and its programs
- Build trust
- Make the experience feel aspirational but approachable
- Push visitors toward downloading and using the Airborne application

The website is primarily a brand, discovery, and app-conversion experience.

3. Primary objective

The website should make a visitor feel:

This is one of the most beautiful, premium, credible, and exciting fitness studios I have ever seen. I want to experience it.

The main conversion goal is:

Get the visitor to download the Airborne application.

The secondary goals are:

- Introduce the available fitness formats
 - Establish aerial fitness leadership
 - Reassure beginners
 - Showcase adult and kids' programming
 - Present both studio locations
 - Communicate facilities, safety, and studio quality
 - Build credibility through visual storytelling and social proof
-

4. Quality benchmark

The website must aim to become the most aesthetically impressive aerial fitness and boutique movement studio website in the market.

A merely functional, technically correct, or “clean enough” website will not be considered complete.

The final result must feel:

- Premium
- Editorial
- Cinematic
- Modern
- Aspirational
- Movement-led
- Brand-specific
- Highly polished
- Mobile-first
- Conversion-focused

It should feel closer to a premium wellness, fashion, movement, or lifestyle brand than a conventional gym website.

The AIR Aerial Fitness website shared separately can be used as a structural and category reference.

Do not copy its layouts, content, or visual identity.

Airborne's version should feel:

- More refined
 - More premium
 - More editorial
 - More contemporary
 - More visually immersive
 - More distinctly Indian and Mumbai-based
 - More closely aligned with Airborne's existing branding
-

5. Visual identity

Core brand colours

Use the existing Airborne palette:

- Airborne Teal: #04C0C1
- Aqua Highlight: #00D8D7
- Deep Teal: #009B9D
- Airborne Grey: #585855
- White
- Black

These colours should guide the design but should not be used in equal quantity.

Recommended balance:

- White and soft neutral surfaces as the primary base
- Black and grey for strong typography
- Teal for primary brand expression and CTAs
- Deep teal for depth and contrast
- Aqua for selective luminous accents, gradients, and motion details

Avoid making every section teal.

The colour palette should feel restrained, airy, and premium.

Shape language

Use:

- Soft corners
- Rounded media containers
- Fine borders
- Thin accent lines
- Elegant pills and tags
- Subtle layering
- Delicate cards
- Generous negative space

Avoid:

- Bulky cards
- Heavy shadows
- Thick borders
- Excessively rounded cartoonish components
- Loud gradient-heavy layouts
- Generic SaaS-style UI sections

Typography

Use a sophisticated typography system:

- One expressive, premium display font for major headlines
- One highly readable modern sans-serif for body content, navigation, and buttons
- Large editorial headlines
- Short, confident statements
- Strong typographic hierarchy
- Carefully controlled line lengths
- Consistent spacing and rhythm

The typography should feel confident and distinctive without hurting readability.

6. Creative direction

The website should visually express:

- Flight
- Suspension
- Balance
- Freedom
- Strength
- Elegance
- Transformation
- Confidence
- Human movement

Aerial imagery should feel cinematic and extraordinary, but not intimidating.

The visitor must understand that:

- Beginners are welcome
- Adults and children can participate
- The environment is supportive
- Safety is taken seriously
- The experience is premium
- Airborne offers serious fitness benefits, not merely visual tricks

Avoid making it look like:

- A circus school
- A bodybuilding gym
- A children-only activity centre
- A dance academy
- A generic yoga studio
- A loud neon fitness brand

7. Website format and scope

Build a polished single-page website with smooth anchor-based navigation.

Separate legal pages may be created later if required.

Suggested navigation:

- Home
- Aerial

- Classes
- Kids
- Studios
- Why Airborne
- FAQ
- Download App

The header should contain a prominent app-download CTA.

The navigation must work cleanly across desktop, tablet, and mobile.

8. Recommended homepage structure

Section 1: Hero

The hero must be visually exceptional.

It should immediately communicate the brand, signature aerial offering, and complete boutique fitness positioning.

Suggested headline direction:

Discover Fitness Against Gravity

Suggested supporting direction:

Mumbai's premium boutique fitness studio for aerial fitness, movement, strength, and confidence.

Possible content:

- Full-width cinematic image or looping muted video
- Aerial athlete in motion
- Short brand statement
- Primary CTA: Download the App
- Secondary CTA: Explore Airborne
- App Store badge
- Google Play badge
- QR code on desktop
- "Scan to download the Airborne app" label

Desktop behaviour:

- QR code should be visible and intentional
- App Store and Google Play buttons should remain visible

Mobile behaviour:

- Store buttons should receive greater prominence
- QR code may remain present but should be secondary

The hero should not contain pricing, schedules, or plan details.

Section 2: Brand introduction

Introduce Airborne as a boutique fitness and movement studio.

Suggested narrative direction:

More than a workout. A new way to move.

The section should communicate:

- Premium studio experience
- Movement across multiple formats
- Programs for adults and kids
- Expert-led sessions
- Strength, flexibility, confidence, and community

Keep the copy concise and visually led.

Section 3: Signature aerial fitness experience

This should be the strongest section after the hero.

It should establish aerial fitness as Airborne's signature differentiator.

Possible headline directions:

Aerial Fitness, Elevated

or

Where Mumbai Comes to Fly

Include:

- High-impact aerial imagery or video
- Elegant movement shots
- Beginner reassurance
- Adult and kids options
- Strength and flexibility benefits
- Safety and guided coaching
- CTA to download the app

This section must communicate that aerial fitness is the defining Airborne experience without making the rest of the studio feel insignificant.

Do not make unsupported absolute claims such as “India’s best” unless approved by Arbaaz or the client.

The design may imply leadership through quality, confidence, and presentation.

Section 4: Explore the complete studio

Suggested headline:

More Ways to Move

Present the broader fitness formats through visually strong cards or an interactive editorial grid:

- Mat Pilates
- Functional Training
- Dance Fitness
- Trampoline Fitness
- Yoga
- Aerial Silk & Hoop
- Kids Aerial Fitness

Each item should include:

- Strong image
- Program name
- One concise descriptive line
- CTA such as “Explore in the App”

Do not show:

- Pricing

- Session counts
- Current schedules
- Live availability
- Membership validity
- Dynamic offers

All transactional CTAs should direct users toward the application.

Section 5: Adults and kids

Create a visually clear distinction between adult and kids' experiences.

Possible two-panel format:

Adults

Focus on:

- Strength
- Flexibility
- Fitness
- Confidence
- Movement exploration
- Beginner-friendly progression

Kids

Focus on:

- Confidence
- Coordination
- Discipline
- Safe movement
- Fun
- Supportive instruction

Use real or highly realistic imagery.

Avoid childish illustrations or making the kids' section feel like a play-school website.

Section 6: Why Airborne

Create a concise, visually elegant trust section.

Possible points:

- Expert-led coaching
- Safety-first aerial training
- Beginner-friendly programs
- Small-batch experience
- Premium studio environment
- Programs for adults and kids
- Multiple movement formats
- Two Mumbai locations

Use thin icons, subtle animations, or an editorial grid.

Avoid generic icon-card clutter.

Section 7: Studio experience and facilities

Showcase the physical studio experience.

Facilities include:

- Washroom
- Changing room
- Shower
- Air conditioning
- Wi-Fi
- CCTV
- Shoe racks
- Clean studio environment
- Strong safety standards

This section should feel premium rather than like a feature checklist.

Use thoughtful photography, spatial composition, and fine iconography.

Section 8: Studio locations

Show both locations separately.

Lower Parel Studio

Address:

CD House, Ground Floor, Mathuradas Mill Compound, Unit No. 2, NM Joshi Marg, next to Antisocial Club, Lower Parel, Mumbai, Maharashtra 400013

Google Maps link:

Use the official Maps link that will be shared or obtained from the existing application.

Mazgaon Studio

Address:

1st Floor, AF Business House, Nesbit Road, Tadvadi, Mazgaon, Mumbai, Maharashtra 400010

Google Maps link:

Use the official Maps link that will be shared or obtained from the existing application.

Each location card should contain:

- Location name
- Address
- Studio image
- Open in Google Maps CTA
- Facility indicators
- Optional location-specific visual identity

Do not show live class schedules.

Section 9: Application download conversion section

This must be a major standalone section, not a minor footer element.

Suggested headline:

Your Airborne Journey, In One App

Explain that the app allows members to:

- Explore memberships
- View schedules
- Book sessions
- Join waitlists
- Manage memberships
- Access relevant offers
- Track upcoming sessions

Include:

- Mobile application mockups
- QR code
- App Store badge
- Google Play badge
- Strong download CTA
- Supporting microcopy

The application preview may use screenshots from the existing Airborne app.

This section should be visually rich and conversion-focused.

Section 10: Community and social proof

Create a flexible social-proof section using whatever high-quality material is available.

Possible content:

- Testimonials
- Instagram posts
- Member photographs
- Google review excerpts
- Community moments
- Short movement videos
- Studio-event imagery

Do not fabricate ratings, member numbers, testimonials, awards, or statistics.

Temporary placeholder testimonials may be used during development only if clearly isolated and easy to replace before public launch.

Section 11: FAQ

Include evergreen questions such as:

- Do I need previous aerial experience?
- Is aerial fitness suitable for beginners?
- Is aerial fitness safe?
- What should I wear?
- Are classes available for children?
- Where are the studios located?
- How do I book a class?
- Can I book a trial?
- Where can I view current memberships and schedules?

Answers related to pricing, schedules, trials, and booking should direct visitors to the application.

Do not hardcode dynamic operational information.

Section 12: Final CTA

End the page with a strong visual conversion moment.

Possible headline:

Ready to Move Differently?

Include:

- QR code
 - App Store button
 - Google Play button
 - Download App CTA
 - Strong aerial visual
-

Section 13: Footer

Include:

- Airborne logo
- Short brand statement
- Lower Parel
- Mazgaon

- Instagram
- Contact information
- App Store badge
- Google Play badge
- Smaller QR code
- Privacy Policy placeholder
- Terms placeholder

The footer should remain visually premium and aligned with the existing Airborne application branding.

9. Content rules

The website should contain evergreen content only.

Do not display:

- Membership pricing
- Plan comparisons
- Current schedules
- Session availability
- Waitlist status
- Changing offer details
- Dynamic class timing
- Live booking information
- Payment interfaces

Reason:

These details can change and are already managed through the Airborne application.

Website CTAs for these areas should redirect users toward the app.

Suggested CTA language:

- Download the App
- Scan to Download
- Explore Classes in the App
- View Memberships in the App
- Book Your First Session
- Begin Your Airborne Journey
- Explore Current Schedules in the App

Use one consistent CTA hierarchy across the website.

10. Asset and content policy

Final client-provided content and assets are not a prerequisite for completing the website.

Do not wait for them.

Use the best currently available materials from:

- Existing Airborne Instagram content
- Existing Airborne social media platforms
- Existing application assets
- High-quality licensed stock photography
- Premium stock video
- Carefully generated AI imagery
- Temporary brand-appropriate copy
- Temporary application mockups

No section should remain incomplete because an asset has not been provided.

Do not use:

- Empty grey placeholder boxes
- “Content coming soon” sections
- Low-resolution screenshots
- Generic bodybuilding photos
- Visibly fake AI anatomy
- Random international gym imagery that conflicts with the actual brand
- Inconsistent image treatments
- Watermarked media
- Unlicensed commercial imagery

All temporary media should be easy to replace later without rebuilding the section.

Social-media image treatment

Images taken from Airborne’s public social profiles should be:

- Cropped carefully
- Colour-treated consistently
- Presented at high visual quality

- Used in suitable aspect ratios
- Protected from distortion
- Optimised for the web

AI imagery standards

Any generated image must be:

- Photorealistic
- Anatomically correct
- Premium
- Consistent with Airborne's brand
- Appropriate for aerial equipment and body positioning
- Free from visual artefacts
- Suitable for both adults and children where relevant

Final original imagery can be swapped in later as a refinement pass.

11. Interaction and animation direction

Use motion to reinforce movement, suspension, flow, and elegance.

Recommended:

- Smooth section reveals
- Subtle image parallax
- Gentle text entrances
- Fine hover transitions
- Elegant CTA interactions
- Soft page transitions
- Controlled marquee or gallery motion
- Delicate line animation
- Carefully paced scrolling
- Light image-scale effects

Avoid:

- Excessive scroll hijacking
- Aggressive bouncing
- Overly fast animation
- Gimmicky 3D effects

- Large animated blobs
- Animation that hurts performance
- Motion that makes text difficult to read

The website should feel alive, not distracting.

Respect reduced-motion accessibility settings.

12. Responsive design expectations

The website must be designed mobile-first.

It must be fully polished across:

- Large desktop
- Standard laptop
- Tablet
- Large mobile
- Small mobile

Do not treat mobile as a compressed desktop layout.

Mobile should have:

- Clear CTA hierarchy
- Readable typography
- Appropriate media crops
- Touch-friendly controls
- Well-spaced sections
- Fast loading
- Prominent app-store links
- No horizontal overflow
- No overlapping typography
- No broken animations

Check all important breakpoints manually.

13. Technical scope

The website should remain lightweight and low-maintenance.

It does not require:

- Backend development
- Admin dashboard
- Authentication
- User accounts
- Membership database
- Pricing database
- Schedule integration
- Booking integration
- Payment integration
- Waitlist functionality
- CMS unless there is a compelling lightweight reason
- API dependency on the Airborne application

It should include:

- Responsive frontend
- Clean component structure
- Reusable content sections
- Easy asset replacement
- App-download links
- QR-code support
- Google Maps links
- Social links
- SEO metadata
- Open Graph metadata
- Favicon
- Basic analytics readiness
- Fast image loading
- Accessible navigation
- Semantic HTML
- Production-ready build

Use the most suitable modern frontend setup already preferred by the OnShore Labs workflow.

Do not over-engineer the architecture.

14. App-download behaviour

The website must support both desktop and mobile visitors.

Desktop

Display:

- QR code
- App Store badge
- Google Play badge
- Clear explanatory copy

Mobile

Display:

- Large App Store button
- Large Google Play button
- Smaller QR code if retained
- No expectation that users scan a code from the same device

The store badges and QR code must use real links once supplied.

Until then, create clearly centralised placeholder constants so the links can be replaced easily.

Do not scatter URLs across components.

15. Performance and accessibility

The website should:

- Load quickly
- Avoid oversized video files
- Use compressed responsive images
- Lazy-load below-the-fold media
- Preserve image quality
- Maintain readable contrast
- Use meaningful alt text
- Support keyboard navigation
- Use accessible buttons and links
- Avoid autoplay audio
- Support reduced motion

- Prevent major layout shifts

Aesthetic ambition cannot come at the cost of unusable mobile performance.

16. SEO basics

Set up evergreen SEO fundamentals:

- Strong page title
- Meta description
- Open Graph image
- Social sharing metadata
- Semantic heading structure
- Studio location references
- Mumbai location context
- Aerial fitness terminology
- Boutique fitness studio terminology
- Adult and kids program references
- Local-business schema readiness if practical

Do not create low-quality keyword-stuffed sections.

The content should remain natural and premium.

17. Delivery expectations

By tomorrow end of day, deliver:

- Complete single-page website
- Finished desktop experience
- Finished mobile experience
- All agreed sections
- Working navigation
- Strong hero section
- Aerial-first visual storytelling
- Complete boutique fitness positioning
- Adult and kids sections
- Both studio locations

- Facilities section
- QR-code placement
- App Store CTA
- Google Play CTA
- Application conversion section
- FAQ
- Footer
- Temporary but high-quality copy
- Temporary but high-quality assets
- Responsive interactions
- Performance-conscious implementation
- Deployment-ready build

The website should not be delivered as:

- A wireframe
- An unfinished prototype
- A collection of placeholder boxes
- A generic template
- A basic landing page awaiting design
- A partially responsive desktop layout

It must feel complete enough to present to the client immediately.

18. Acceptance criteria

The task is complete only when:

1. The website looks visually exceptional.
2. Aerial fitness is clearly the signature offering.
3. Airborne is also positioned as a complete boutique fitness studio.
4. The brand colours and visual language are used consistently.
5. The website does not resemble a generic gym template.
6. All agreed homepage sections are present.
7. No dynamic pricing or scheduling details are hardcoded.
8. The app-download journey is prominent throughout the page.
9. QR code, App Store, and Google Play placements are complete.
10. Both studios are represented.
11. Adult and kids experiences are clearly communicated.
12. Temporary content does not make the website appear unfinished.
13. Desktop and mobile layouts are both fully polished.

14. Animations feel refined and do not damage performance.
 15. All links and CTAs behave correctly.
 16. Images are optimised and consistently treated.
 17. The project builds without errors.
 18. The website is ready for review and deployment.
-

19. Working approach

Do not spend the first day waiting for perfect assets or preparing extensive design documentation.

Start building immediately.

Recommended sequence:

1. Establish the design system and page skeleton.
2. Complete the hero and navigation.
3. Build all major sections.
4. Source or generate temporary premium assets.
5. Complete responsive behaviour.
6. Add motion and interaction polish.
7. Add app-download conversion elements.
8. Run visual and technical QA.
9. Deliver a fully working build by tomorrow end of day.

Use judgment and take ownership of the creative execution.

Where final client assets are unavailable, make the strongest brand-appropriate decision and proceed.

The standard is not simply to complete the sections.

The standard is to create a website that makes Airborne look like the most desirable, premium, and visually distinctive aerial-led boutique fitness studio in the market.
